

Amendments to the Specification

Please replace the paragraph at page 5 lines 16-22 with the following amended paragraph:

Assuming trace routing may provide a results list comprising both text based and numeric network addresses, the numeric network address are looked up 106 to determine their text based encoding. In one embodiment having a TCP/IP network, looking up network addresses comprises performing a reverse DNS lookup on the numeric network address. In one embodiment, rather than looking up all numeric addresses in the list, instead less than all are looked up. For example, one might only look up a few of the network addresses in the list "nearest" the client.
